Maquoketa, Iowa 52060

Subject: Clinton Engines, 605 E. Maple Street, Maquoketa, Iowa 52060

Dear Mr. Wagner:

Thank you for submittal of the March 22, 2006, Site Assessment Work Plan for the site referenced above. We approve your work plan as proposed subject to the comments below. As mentioned in the work plan, and to avoid the need for additional investigation in the future, every attempt should be made in order to define the extent of contamination.

In the work plan, it appears that further sampling is not planned near the area of previous borings B-2 and B-7 located southeast of boring B-3. Please note that due to the limited Volatile Organic Compound analysis from boring B-2 and B-7, it is possible that the extent of contamination may spread through this portion of the site and therefore would require more sampling in this area as well.

It is understood that defining the extent of contamination may require modification of the work plan during field activities. Please include any modifications to the work plan in the final report. Feel free to contact me if there are any questions, comments, or concerns at 515-281-4420.

Sincerely,

Tami S. Rice  
Environmental Specialist  
Contaminated Sites Section  
Iowa Department of Natural Resources
